### **Vydraulics strengthens market position with strategic acquisition of Nubé Hydraulics**

The Vydraulics Group, a leading player in hydraulic and motion control solutions, is pleased to announce the strategic acquisition of Nubé Hydraulics, a prominent manufacturer of manifolds and control blocks for hydraulic systems based in Mill, the Netherlands. This acquisition marks a significant step in Vydraulics' continued expansion and strengthens its market position in the hydraulic systems industry.

#### **What does this mean for our customers?**

Nubé Hydraulics, based in Mill, the Netherlands, is a leading specialist in the design and manufacture of high-quality hydraulic manifolds. With a modern manufacturing process and a wide range of materials and surface treatments, Nubé supplies products that meet the highest quality standards.

Martin Arts, the founder and former owner of Nubé Hydraulics, welcomes the acquisition by Vydraulics: *'I am very pleased that Nubé is now part of the Vydraulics Group,'* says Arts. *"I am confident that the new parent organization will continue the work that my team and I have built. We have always focused on quality and customer satisfaction, and I am certain that Vydraulics will uphold these values. I look forward to a bright future for Nubé within the Vydraulics Group and am convinced that this acquisition will contribute to the further growth and development of the company, both within the Benelux and internationally.'*

Steven Vangeersdaele, CEO of Vydraulics, is also delighted to welcome Nubé Hydraulics to the Vydraulics family and highlights the benefits for customers: *'By adding Nubé's expertise and production capacity to the Vydraulics Group, we can provide our existing and new customers in the Benelux with even better integrated manifold solutions,'* says Vangeersdaele. *"This expansion allows us to fully support our customers and create maximum added value. Once a design is optimized and tailored to the customer's application, our production process is fully focused on Operational Excellence—exactly what the market demands.'*

#### **A strategic step forward**

This acquisition enables Vydraulics to produce more manifolds entirely in-house, significantly reducing lead times and increasing reliability—critical factors for customers in the hydraulic industry.

*'This acquisition aligns perfectly with our strategy to offer both components and complete solutions in motion and control technology. With the addition of Nubé Hydraulics, we strengthen our position as an independent and autonomous provider,'* adds Vangeersdaele.

Through this collaboration, Vydraulics and Nubé Hydraulics are joining forces to better serve customers in the Benelux and drive shared growth ambitions.

**Note for editors:**

*The Vydraulics Group consists of several companies with a passion for motion and control technology. Together, we are an independent and experienced partner for resolving challenges requiring components, cylinders, manifolds, subcontracting and total solutions. From design, production and commissioning to maintenance and service.*

*We build and maintain strong relationships with customers in many markets, particularly in hydraulics, infrastructure & civil engineering, offshore & dredging, energy, heavy industry, maritime, transport & loading and defence.*
